

Holster Aware™

by Yardarm™

Holster Sensor

Sensor installed on Holster

The Holster Aware sensor detects whether a lethal or non-lethal weapon has been drawn or inserted into a holster. The device works with many public safety Internet of Things (IoT) applications and is the holster sensor of choice for the world's leading body-worn camera manufacturers.

The sensor continuously analyzes the presence of the weapon within the holster to create removal and insertion events. As events are detected, this information is transmitted via fully secured, AES encrypted Bluetooth wireless technology to any Bluetooth enabled data hub such as a smartphone, body-worn camera, land mobile radio, or other Bluetooth enabled devices.

Real-time data from the sensor can be used to deliver event alerts to nearby officers, an E911 dispatch center, or to communicate with other devices for applications such as auto-activation of body-worn cameras.

The sensor is easily installed onto approved holsters using 3M™ VHB™ adhesive and mounting brackets for select holsters.

Specifications

Dimensions (LxWxH in inches)	2.35 x .85 x .57
Weight	10 g
Storage Temperature	(> 60 day storage) 15 to 35 °C
Operational Temperature	-20 to 60 °C
Charging Temperature	0 to 45 °C
Battery Size	62 mAh
Charging	Standard Micro USB at 10mA. Full charge in less than 8 hours.
